# AURUS Project Code Submission Details

Project Name: AURUS (AUtonomous Robotic Ubiquitous System)

1. Microcontroller Code (Mic Code):

- Description: The core backend and hardware control logic for the AURUS robot. It runs on a Raspberry Pi, managing motors, sensors, and AI components.
- Programming Language: Python 3
- Integrated Development Environment (IDE): Visual Studio Code

2. Mobile Application Code (Mob Code):

- Description: AURUS does not use a standalone mobile application. Instead, it features a highly responsive, browser-based Web Dashboard accessible from any mobile device, acting as the primary control interface.

3. Web Application Code (Web Code):

- Description: The user interface (Dashboard) used to interact with AURUS, featuring speech-to-text integration, controls, and camera views.
- Programming Languages: HTML5, Vanilla JavaScript, CSS3
- Integrated Development Environment (IDE): Visual Studio Code

Note: All relevant codes have been placed in their respective folders as per the guidelines.
